Old: How to Activate Activate Download for W10 with Advanced Link for Unregistered account hope that helps A: I think you should try running this code: `CoreMod.WiiHook.Activate(); CoreMod.ProcessDirectory(@"FarCry32_temporary"); CoreMod.WiiHook.Deactivate();` which basically calls: `[DllImport("CoreMod.dll")] static extern bool ProcessDirectory(string directoryPath); [DllImport("CoreMod.dll")] static extern bool CoreMod.WiiHook.Activate(); [DllImport("CoreMod.dll")] static extern bool CoreMod.WiiHook.Deactivate();`; A: The answer is basically in the other questions, but I'm going to try to explain the more basic things that have gone wrong: Not finding the.dol or.xml files You are looking for a directory inside your Far Cry 3 folder, not inside the root Far Cry 3 folder, so you need to add a `@FarCry32` to your filename. Not finding the.txt files You are looking for a file inside a directory. These files are called.txt files and are not located in the root of your Far Cry 3 folder. A smart way to navigate to that file would be to start in the installation folder for Far Cry 3 and then add "Patch.txt" to the path. So, the path for the Patch.txt file in your Far Cry 3 folder would be `@FarCry3/mods/patch.txt`. It's very likely that this file is in the same folder as the files you found. The.txt files contain an installation description that tells you exactly what you need to do,
